

How to accelerate capacity building and learning for outcomes?

18 02 2017

Sanchita Ghosh

Capacity Building ⇌ Learning

- Inter-related areas
- Both operate at different levels
- Learning is a key element in capacity building, and integrates thinking and doing.

How has the sector stepped up efforts?

1. Open-ness to new solutions, opportunities, methods and technologies
 - Virtual Training for scaling up
 - Incentives, logistical support for master trainers and motivators
 - Strong internal communication enabled via Whatsapp, video-conferencing and other tech platforms
 - Rapid Action Learning Unit (RALU) in the guidelines to upscale good practices, learn from failures, influence policy and practice
2. Cross sectoral support and partnerships
3. Increased funds allocation
4. Accountability

How do we accelerate progress?

1. Quality viz Quantity (Depth viz width)
2. Do we know enough? Existing mechanisms and their efficacy – skill gaps, structural constraints, tools that do or do not work.
3. Dynamism and Rapidity and their factors (formal feedback systems)
4. Structured, Targeted, Rigorous
5. Measurement and Analysis (tipping point)
6. Leadership and beyond
7. Models, if not institutions

Thank you
