WHY URBAN SANITATION CAPACITY BUILDING?

- Knowledge gap among the local stakeholders (policy/decision makers, planners, consultants and practitioners) about the non-sewer sanitation and FSM.
 - Number of research on non-sewer sanitation happening but the outcomes have not trickled down to the local professionals who are in the forefront.
 - Number of tools are available and being developed but not used in field application.
 - Existing knowledge platform are not well utilized at the local level
 - New emerging technology and innovations need better strategy for its promotion
 - Majority of city authorities do not have time and opportunity to learn innovation
 - Formal courses are not available on non-sewer and FSM
 - IT based on line courses are not widely used by local professionals
 - Lack of coordination among the grantees and partners to share experiences and complement each others work
-

UNDERSTANDING THE NEED OF DIFFERENT STAKEHOLDERS

CAPACITY BUILDING FRAMEWORK
